

# How to Retrieve Saved Password from RAW Evidence Image

October 22, 2015 By Raj Chandel

First Download **OS Forensic** from [here](#) and install in your pc then open **OSForensic** and click on **Create Case** button to create a new forensic case.

Now enter the details such as Case Name, Investigator Name, Default Drive, and Acquisition Type To specify the case folder, click on **browse** & select the Location where you want to save your Evidence Report. Now click on ok.

**New Case** Help

Case Name:

Investigator:

Organization:

Contact Details:

Timezone:

Default Drive:

Acquisition Type: ☐ Live Acquisition of Current Machine ☒ Investigate Disk(s) from Another Machine

Case Folder: ☒ Default Location ☐ Custom Location

☐ Log case activity

Now it will show us the registered case in this tool. Now to manage this case, click on **Add Device** option available in **Manage Case**.

**OSForensics - Forensics Investigation** Help

- Registry Viewer
- File System Browser
- SQLite DB Browser
- Web Browser
- Passwords
- System Information

### Manage Case

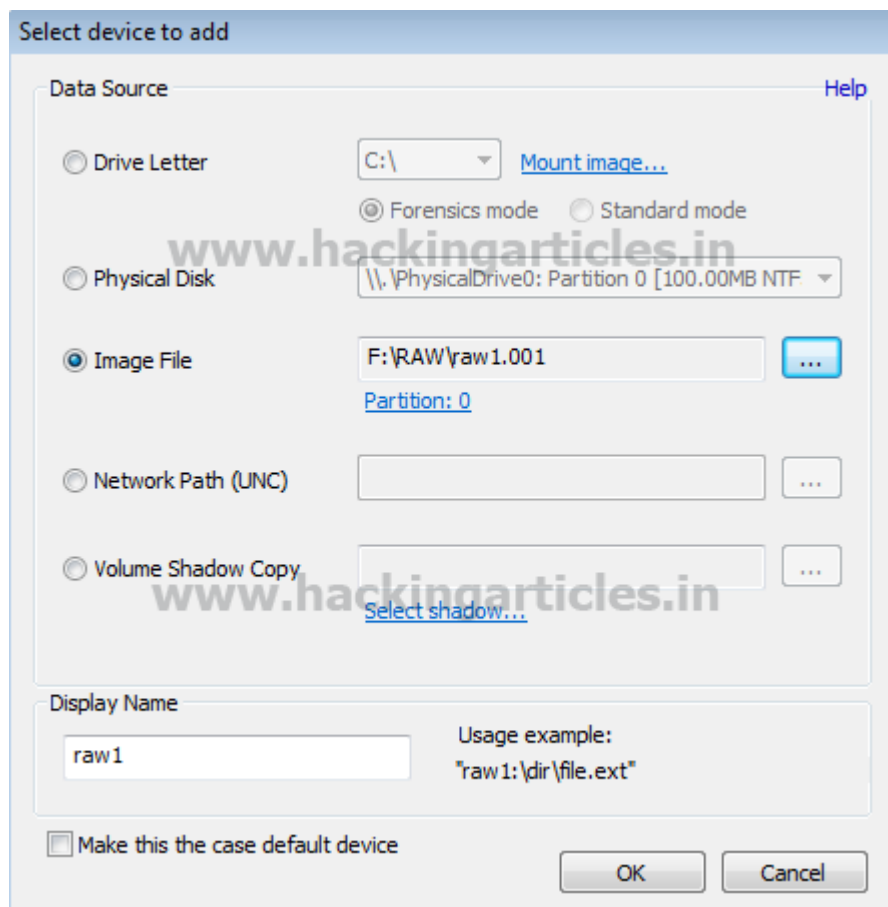

Select Case

| Title                     | Create Date                            | Location                                |
|---------------------------|--|---|
| ✓ Forensics Investigation | Thursday, October 22, 2015, 9:49:05 PM | C:\Users\RAJ\Documents\PassMark\OSForen |

Manage Current Case

| Title | Module | Case Item | Date Added |
|-------|--------|-----------|------------|
|       |        |           |            |

Now select **Image File** option in **Select Device to add** option. Now assign the path of the folder where image file exists and also give the **Display Name** which is compulsory. Click on OK Button.

Now to get the saved browser password clicks on **Find Browser Passwords Option** and selects the **Scan Drive** option and then click on **Retrieve Password**. It will show you all saved passwords in RAW Image.
