

# How to Mount Forensics image as a Drive using P2 eXplorer Pro

May 20, 2015 By Raj Chandel

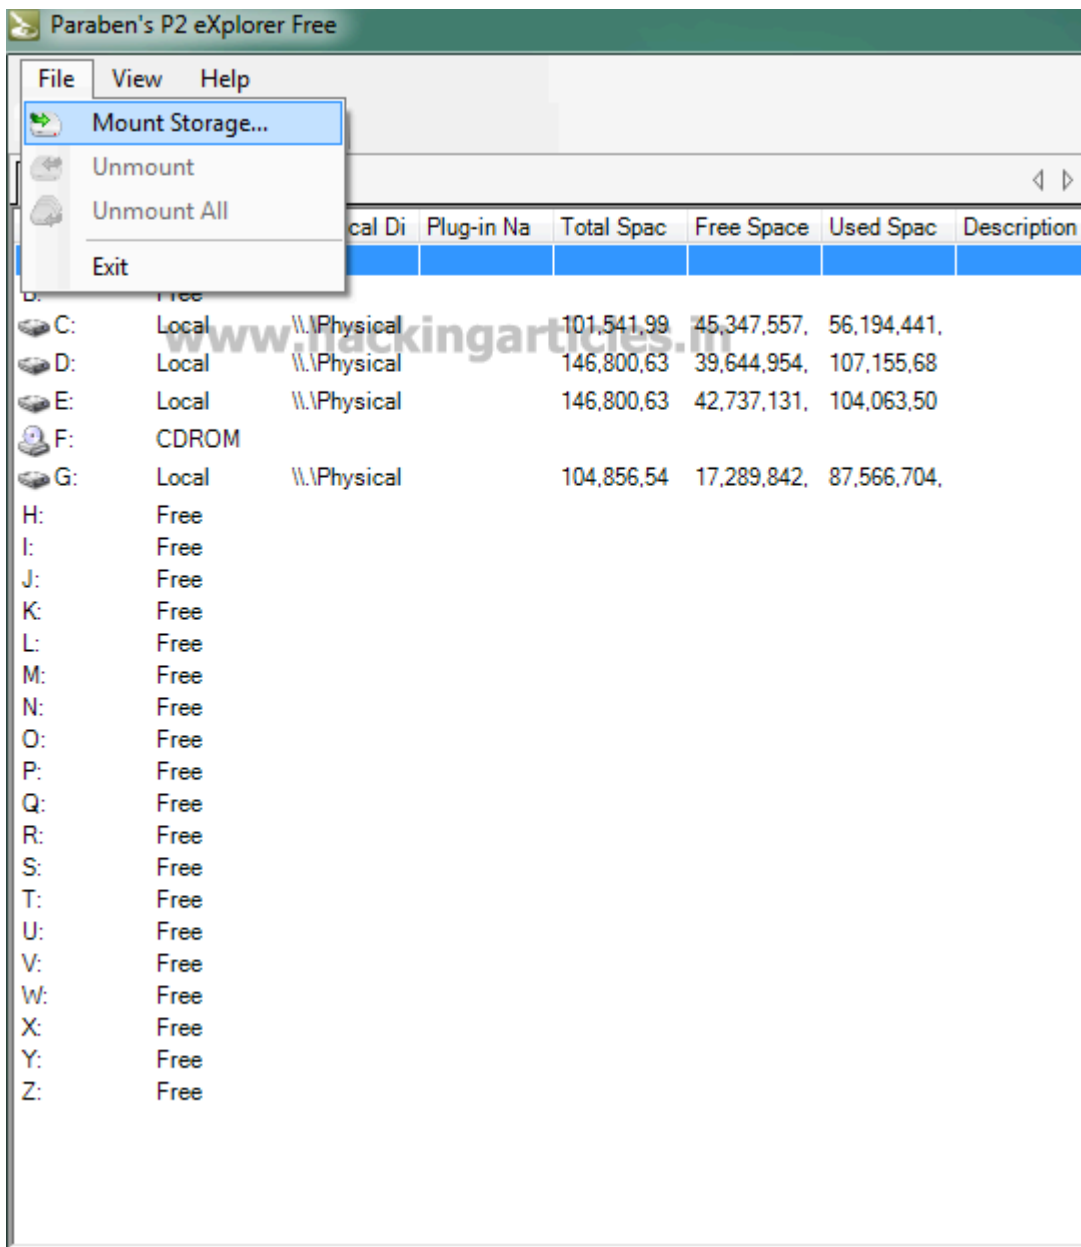

P2 eXplorer Pro is a specialized component of P2C that allows you to virtually mount forensic images such as raw DD, E01, and even virtual machine images Free with any purchase of P2C. as local drive letters

P2 eXplorer Pro can mount the following image formats: Encase (E01), Forensic Replicator (PFR), SafeBack 1, 2, & 3, SMART, FTK DD & E01, Raw DD, WinImage, Paraben's Forensic Containers (P2S), vmWare, VirtualPC, & VirtualBox (VDI).

First of all, we are clicking on My Computer option & it will show us all physical drives and removable storage drives.

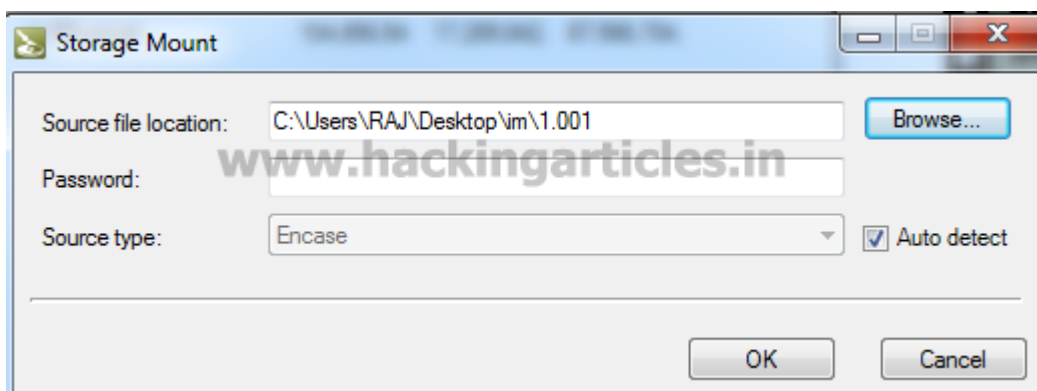

First Download **P2 eXplorer** from [here](#) and install in your pc then open **P2 eXplorer** and click on **Mount Storage** button.

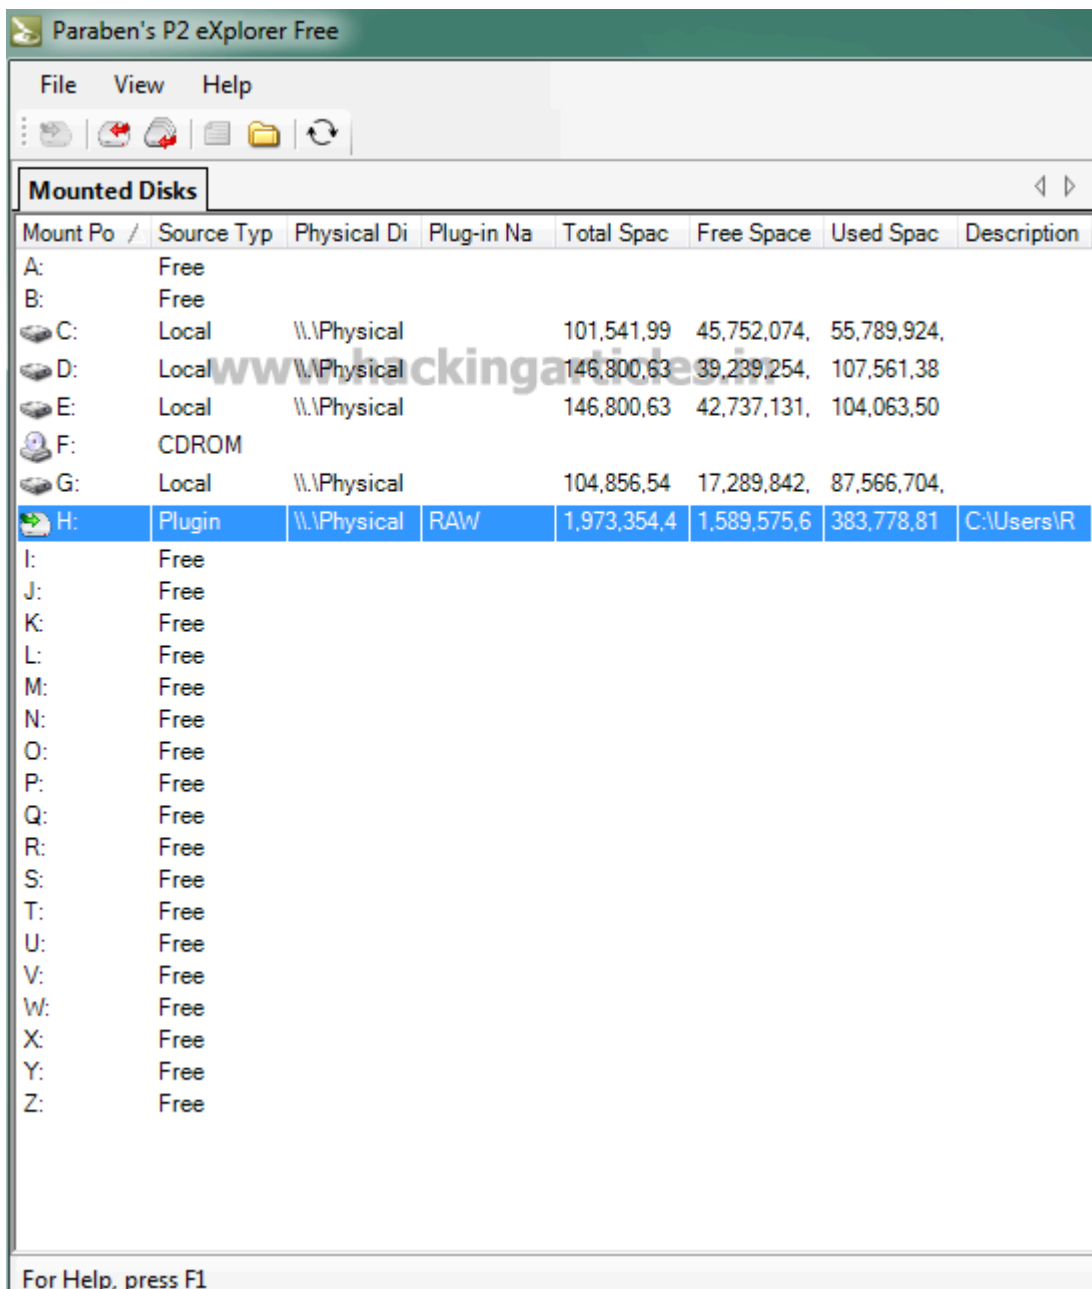

Now load the Evidence Disk Image by clicking on Browse Option

**How to create Disk Image read this article**

**<http://www.hackingarticles.in/how-to-create-copy-of-suspects-evidence-using-ftk-imager/>**

Now it will show the mounted Image.

Now click on My Computer. It will show you the Mounted Image as a Drive.
